

At Image Engineering, we test a wide range of imaging systems including digital/video cameras, mobile phones, automotive, security, etc.

We are the world's largest test equipment manufacturer – hardware and software – for image quality testing. Since 1997, our products have helped camera manufacturers improve their imaging devices.

Due to a recent expansion, especially in the automotive and security camera sectors, we are seeking motivated team members to strengthen our software development team. This is a **full-time permanent position** with the opportunity to **start immediately**.

## Software Developer

### Your Responsibilities:

- Development of analysis software for image quality
- Development of test system control software in various fields such as autonomous driving, security cameras, medical cameras, mobile phone cameras, etc.
- Direct collaboration with our domestic and international customers

### Your Qualifications:

- Knowledge of C++, preferably Qt, or another object-oriented programming language
- Proficient in English both written and spoken
- Ability to occasionally travel internationally, e.g., USA or Japan
- Experience with image processing and databases is beneficial but not required

### We Offer:

- Interesting and exciting tasks in a future driven industry
- Small and highly motivated teams
- Excellent location near the train station of Horrem (only 14 min. from Cologne main station)
- Flexible working hours and 30 days of paid vacation time
- New office building with small offices, social rooms, and modern equipment

### Interested?

We look forward to your application! Please send your CV with salary expectations and possible starting date to [bewerbung@image-engineering.de](mailto:bewerbung@image-engineering.de). Contact: **Uwe Artmann**
