

FRAME LEADER (S16)

REFLECTANCE

The center of the test chart shows a sector star with 36 sectors which is used for focussing film cameras.

The marking lines allow in addition an assessment of the picture format sector as is produced in S16 negative, on the 16:9 screen of the camera, and in television picture after 16:9 scanning. The S16 film format is marked by the outer line. The inner (dotted) line indicates the format sector, which is seen on the camera screen. The dashed line in between indicates the format that is actually recorded by the scanner.

With the format marking arrows any format deviations can be determined in per cent of the picture width and picture height.
